HOTEL SERVICE

Hotel management often suffers from a confusing workflow and unnecessary paper stacks. Naturally, inefficient operational processes then lead to general dissatisfaction.

Hotel Management using Visual Map

We seek to improve these operational processes using a digital building map. With our interactive floor plans, your processes, qualities and general information will be recorded, located and thereby made transparent and evaluable.

Hotel management will become efficient, clear and easy to use.

All information is portrayed in real time and visualized on the map to allow immediate interventions on events and problems. Our quick and easy-to-use interface will increase the working comfort of the employees and the digital competence of the whole team.

Clear, fast communication and effective quality management with simultaneous documentation of the work processes translate into profits. Through mobile devices, information about rooms (such as occupancy, cleaning status, qualities, and products) will be collected. This information is shared and linked dynamically to our platform. Meaningful B2B solutions complete our offer.

With one-time installation costs from 950,-€ p. hotel (incl. 50 guestrooms, add. 7.50€ p. guestroom) and a monthly subscription from 1.00€ p. guestroom we offer you a simple cost structure for your business calculations.

As an advisory and executive partner with over 20 years of project management experience, we are happy to support you in performing your digital transformation.
